Unipoint Quality Toolkit Installed to Manage Quality Control Activities

Durham, Connecticut - December 2006 - Technical Manufacturing Corporation announced this month that it has implemented the uniPoint Quality Toolkit Software system to manage all aspects of Quality Control activities within the company. The Quality Toolkit was designed for and seamlessly integrates with the Exact Alliance ERP Software System currently used at the company. The system automates the life-cycle of non-conformances, corrective actions, preventative actions, tooling & equipment maintenance and document control to ensure that any and all appropriate actions are always documented, implemented, maintained and are effective. The Quality Toolkit Software is currently running at version 9 and represents the latest and next generation of the system which is based upon the Microsoft .NET technology framework. The software is currently used by over 2,000 companies across the United States, Canada, Mexico, Australia and the European Union.

The uniPoint Quality Toolkit system is expected to benefit the company in several ways. First, it will help increase the overall quality of the company's products through the capture and analysis of statistical process control data required to quickly identify and resolve any root-cause deficiencies in the manufacturing process. Secondly, it will ensure that all tooling and equipment is consistently maintained in accordance with the calibration cycle as recommended by the equipment manufacturer. Finally, the system will ensure that all process-control related documents and data are current and reflect the most complete process available. More information on the uniPoint Quality Toolkit can be obtained at <http://www.unipoint.ca/quality.htm>.

About Technical Manufacturing Corporation

Technical Manufacturing Corporation is a Connecticut-based contract electronics manufacturer that has been successfully servicing the electronics manufacturing requirements of small to Fortune 500 companies worldwide since 1985.
