

FOR IMMEDIATE RELEASE

Merit Status Awarded to the Company against NADCAP AC7120  
Accreditation in Electronics for Circuit Card Assemblies

Durham, Connecticut – March 2019 – Technical Manufacturing Corporation, a leading supplier of contract electronics manufacturing services to the aerospace and defense industry for mission-critical, high-reliability and harsh environment applications where reliability and continued performance is critical, announced this month that it has been awarded merit status for the National Aerospace and Defense Contractors Accreditation Program against the AC7120 audit criteria for electronics. Commonly known as NADCAP, the accreditation program was developed by a consortium of prime aerospace and defense contractors including Lockheed Martin, Raytheon, Northrop Grumman and Boeing and is managed by the Performance Review Institute (PRI) through the Electronics Task Group (ETG) to ensure that all accredited suppliers conform to a uniform set of over 450 rigorous manufacturing process requirements necessary to produce circuit card assemblies for the aerospace and defense industry.

The NADCAP merit program exists to reward companies who exhibit superior performance during their audits by extending their reaccreditation audit cycle frequency from twelve months to up to twenty-four months, generating a significant cost savings. Companies who achieve merit status means that they typically receive three times fewer major non-conformances and approximately two times fewer total non-conformances in their NADCAP audits. According to the PRI website, “the NADCAP audit is a stringent process designed to highlight members of the aerospace supply chain with outstanding quality and engineering processes. Entry into the merit program represents an industry-wide recognition for those suppliers who really are the crème de la crème in the industry”.

About Technical Manufacturing Corporation

Technical Manufacturing Corporation is a Connecticut-based contract electronics manufacturing company that has been successfully providing electronics manufacturing services to companies worldwide since 1985. We build a wide variety of electronic and electromechanical products for our customers, which are used in many different commercial and military applications across all industries including the medical, computer, automotive, aerospace, test & measurement and telecommunications industries.
